Frontend Developer and Graphic Designer

+385 097 672 4628 

Hey, I'm Robertino — a 23-year-old full-stack developer and graphic designer from Croatia, with a Bachelor's degree in Electronic Business and Software Engineering. I build things for the web and make sure they actually look good doing it. On the dev side I work with React, Next.js, Python, and Django, with hands-on experience across PostgreSQL, MySQL, Neo4j, and MongoDB. On the design side, Figma, Photoshop, and Illustrator are my go-to tools. I like being involved in the full picture — design, code, architecture, all of it. That combination of technical and creative thinking is what I bring to every project.

Slatina, Croatia

PROJECTS SUMMARY

Peoplet — Network Visualization App (2025–2026)

Features: Interactive Graph Visualizations, AI-Powered Insights, Network Analysis, Responsive Design

Technologies: Next.js | React.js | Python | Django | Neo4j | PostgreSQL | Tailwind CSS | React-force-graph

- Built a full-stack desktop platform for mapping relationships between people, projects, and ideas — designed to reveal structure, influence, and hidden patterns inside complex systems.
- Implemented graph-based data architecture using Neo4j for efficient storage and querying of evolving network relationships.
- Developed dynamic graph interface where entities connect and influence one another in real time, replacing static lists and dashboards.
- Built features for identifying key nodes, understanding community structures, and navigating complex networks with clarity.
- Developed AI-powered analytics to surface hidden patterns and deliver actionable insights from connected relational data.
- Built robust REST API using Django REST Framework to handle complex network queries and data processing at scale.
- Designed a clean, focused desktop UI using Tailwind CSS ensuring visual legibility and performance as data grows.
- Ensured secure user authentication and authorization with JWT tokens and encrypted sessions.

Traqr — Trading Journal & Portfolio Tracker (2026)

Features: Trading Journal, Multi-Asset Portfolio Tracking, Real-Time Market Data, Subscription Management, Analytics Dashboard

Technologies: Figma | Next.js | React | TypeScript | Supabase | PostgreSQL | Tailwind CSS | Stripe | Recharts

- Built a full-stack SaaS trading journal enabling traders to log spot and futures trades with entry/exit prices, stop loss, take profit levels, leverage, and risk metrics.
- Developed a multi-asset portfolio tracker supporting stocks, ETFs, crypto, commodities, and cash positions with live price enrichment via CoinMarketCap and Yahoo Finance APIs.
- Implemented a Stripe subscription system with trial, Starter, and Pro plans including checkout sessions, customer portal, and webhook-driven plan synchronization.
- Designed a dark-themed dashboard with cumulative P&L charts, 35-day heatmap, allocation pie charts, and real-time portfolio valuation across multiple currencies.
- Architected server-side plan enforcement with feature gating — trade limits, portfolio caps, and Pro-only features such as CSV import, advanced analytics, and portfolio intelligence.
- Built a live market browser and watchlist with target price alerts across crypto, stocks, ETFs, and commodities.
- Integrated multi-currency FX conversion with per-asset currency-aware cost basis calculations and cash position management.

Print Alfa Web Shop (2024)

Features: Next.js, MongoDB Integration, Stripe Payments, Responsive Design

Technologies: Figma | Next.js | React.js | MongoDB | Tailwind CSS | Stripe

- Developed a modern e-commerce enabling creative agency to showcase and sell their services online.
- Implemented secure payment processing through Stripe integration with real-time transaction handling.
- Built responsive product catalog with dynamic filtering and search using MongoDB for efficient data management.
- Created admin dashboard for managing products, orders, and customer data with robust authentication.
- Designed and implemented mobile-first UI components using Tailwind CSS for a seamless user experience.
- Optimized performance through Next.js features like static generation and image optimization.
- Integrated analytics tracking to monitor user behavior and optimize conversion rates.
- Ensured secure user authentication and authorization with JWT tokens and encrypted sessions.

SKILLS

Programming languages: JavaScript, TypeScript, Python,

Backend & API Development: Next.js, Django, RESTful APIs

Frontend Development: React.js, TailwindCSS

Databases: PostgreSQL, MySQL, MongoDB, Neo4j

Cloud & DevOps: Git, GitHub, AWS

Design: Figma, Adobe Photoshop, Adobe Illustrator, Adobe Premiere

WORK EXPERIENCE

Full-stack Developer

May 2025 - today

Peoplet.io

Graphic Designer

2018 - today

Family Graphic Design Company

EDUCATION

○ Bachelor's degree in Informatics

Josip Juraj Strossmayer University in Osijek

10/2021 - 09/2024

○ Master degree in Informatics

Juraj Dobrila University in Pula, Faculty of Informatics in Pula

10/2025 - today

LANGUAGES

Croatian

Native

English

Fluent

CERTIFICATIONS

The Complete 2023 Web Development Bootcamp (Jul. 2023. - Nov. 2023)

Udemy

Responsive Web Design (Jan. 2023. - Jun. 2023.)

freeCodeCamp

AWARDS AND ACHIEVEMENTS

1st place in Ecotrophelia Croatia competition, after winning in Croatia we were competing in European competition with other countries from Europe which was held in Koln, Germany (2023.)

Ecotrophelia Croatia - Ecotrophelia Europe

Dean's award for achievements in Ecotrophelia competition in creating eco-innovative products (2024.)

Faculty of tourism and rural development in Požega
